

DUNE RESTORATION UPDATE FOR ROSEMARY BEACH

By selecting to implement all four phases of the Dune Master Plan™, the Rosemary Beach community is strengthening your natural protection against destructive wave action.

ROSEMARY BEACH'S DUNE MASTER PLAN™ PROGRESS REPORT

Phase 1: Preservation is complete. Dead vegetation and debris have been carefully extracted. Native plants have been fertilized to promote growth.

Phase 2: Protection was completed on 04/30, just in time for Turtle Nesting Season. Sand fences have been installed along the waterfront properties to develop an evenly-distributed, continuous berm. Native vegetation has also been installed between the fences to anchor wind-driven sand in place.

Phase 3: Optimization will be implemented after our team evaluates how much of the existing vegetation will be revitalized through the initial cleanup and application of fertilizer.

Phase 4: Maintenance will start on 08/01/22 and last through 07/31/23. Phase 4 will be implemented on a quarterly basis to maintain and enhance the outcome of the three phases above. Maintenance efforts will include the addition of native vegetation, a new round of fertilization, and the ongoing removal of debris and trash.
